As From Our Roots

Fertile Soils Dating Back to Ancient Times

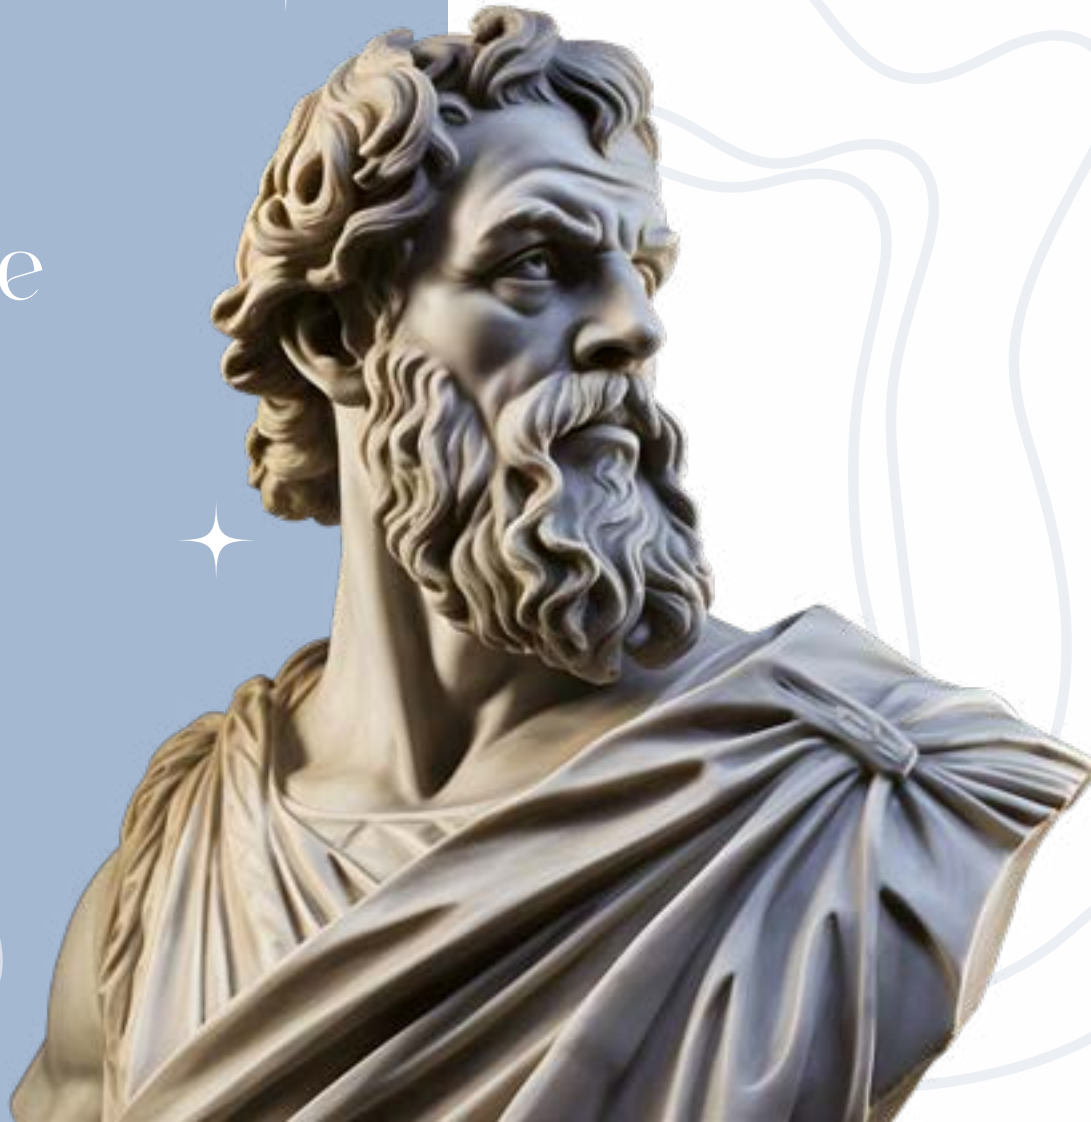

"The most beautiful earth under the sky and the most beautiful sky above the earth."

This quote of Herodotus, which summarizes the natural beauties, fertile soils and unique climate of Aydın, is considered as the praise that emphasizes how special and valuable lands we have been in the region throughout history.

Thales, the father of philosophy, attributed the origin of everything, the "arkhe", to water. Thales came to this conclusion because water supports life, that is, it plays an active role in the continuation of life.

Water is the Cause of Everything

Where Soil and Passion Meet

We are nourished by the richness of the soil and come to life with our passions. This combination leads us to an unlimited potential.

Born in the fertile soil of Menderes, our story is shaped at the point where the power of the soil and passion meet. Each piece of land bears the traces of many lives that have survived throughout history and received their fertility from these lands. We act with the inspiration and passion we draw from these ancient lands, and we work with all our strength for a stronger future at every step.

Every Turn is a Beginning

This Return is also a Story of
Creativity and Originality.

We have traveled to different parts of the world following our dreams, we have developed our vision with new flavors, cultures and ideas, and now it's time to return to our roots.

Journeys End.

History

As an expression of our gratitude and love for these lands where we eat thyme-scented figs on hot summer days, dive into the cool sea of the deep blue Aegean coast, fill the cubes under our houses with the oil of the olives we harvest from the mountains every year, remove the thorny cocoons in winter and roast our

chestnuts in the Yoruk stoves, In short, as an expression of our gratitude and love for these lands where we were born and nourished, in 2014 we set out on a journey to give back to the earth what we took from it, with the memory of all the people who have passed through here and the hope of those who will pass through.

Meeting with Soil

We continue to work with the aim of restoring our region, which for centuries has been a symbol of fertility, agriculture and natural beauty, to its former position in a more efficient and rational way, using modern techniques. Our past is not merely the history of the last 20-30 years but represents a trajectory that spans thousands of years. On this long road from the Lydians to the Hellenes, from the Persians to the Byzantines, from Aydınoğulları to the Ottomans

and from there to the Republic, we will keep alive the memories of all the people who have passed through here and write new stories. We are working to serve our fertile land by combining the traditions of the past with the innovations brought by technology. We continue to grow and develop by replacing the goals we have achieved with new ones.

A saying attributed to the famous thinker Confucius says that everyone eats and drinks, but only some appreciate the taste. Based on this philosophy, we have been working and producing non-stop since the day we started our agricultural production investments within our company 5k1a in 2014, taking

into account the historical importance and natural richness of our region.

Employing modern methods that prioritize inquiry, questioning, and rational thinking, we set ourselves a fundamental goal: to elevate both our region and our own practices as examples in agricultural production.

Story Continues...

We prioritise quality products and reliable food criteria at every stage of our production activities in the Menderes Valley, which has the most fertile soil in Türkiye. With the same understanding, we process and package our premium quality fruits and offer them to our domestic and international customers. All our efforts are aimed at ensuring that our brand dbfruits is identified with quality production and reliable trade in this process that starts from the

orchard and ends on the dining tables. In this way, we want to show that these lands can produce quality products that exceed international standards, and what the real potential of agricultural production in our country is. This is why we are determined to create value for our stakeholders and our country, and to become a dynamic and competitive brand.

Stories Begin...

Menderes's Abundance on World Tables

We process our fruits, which we grow with modern methods in the most fertile soils of the world with the registration it has received from history, with care; we send them all over the world

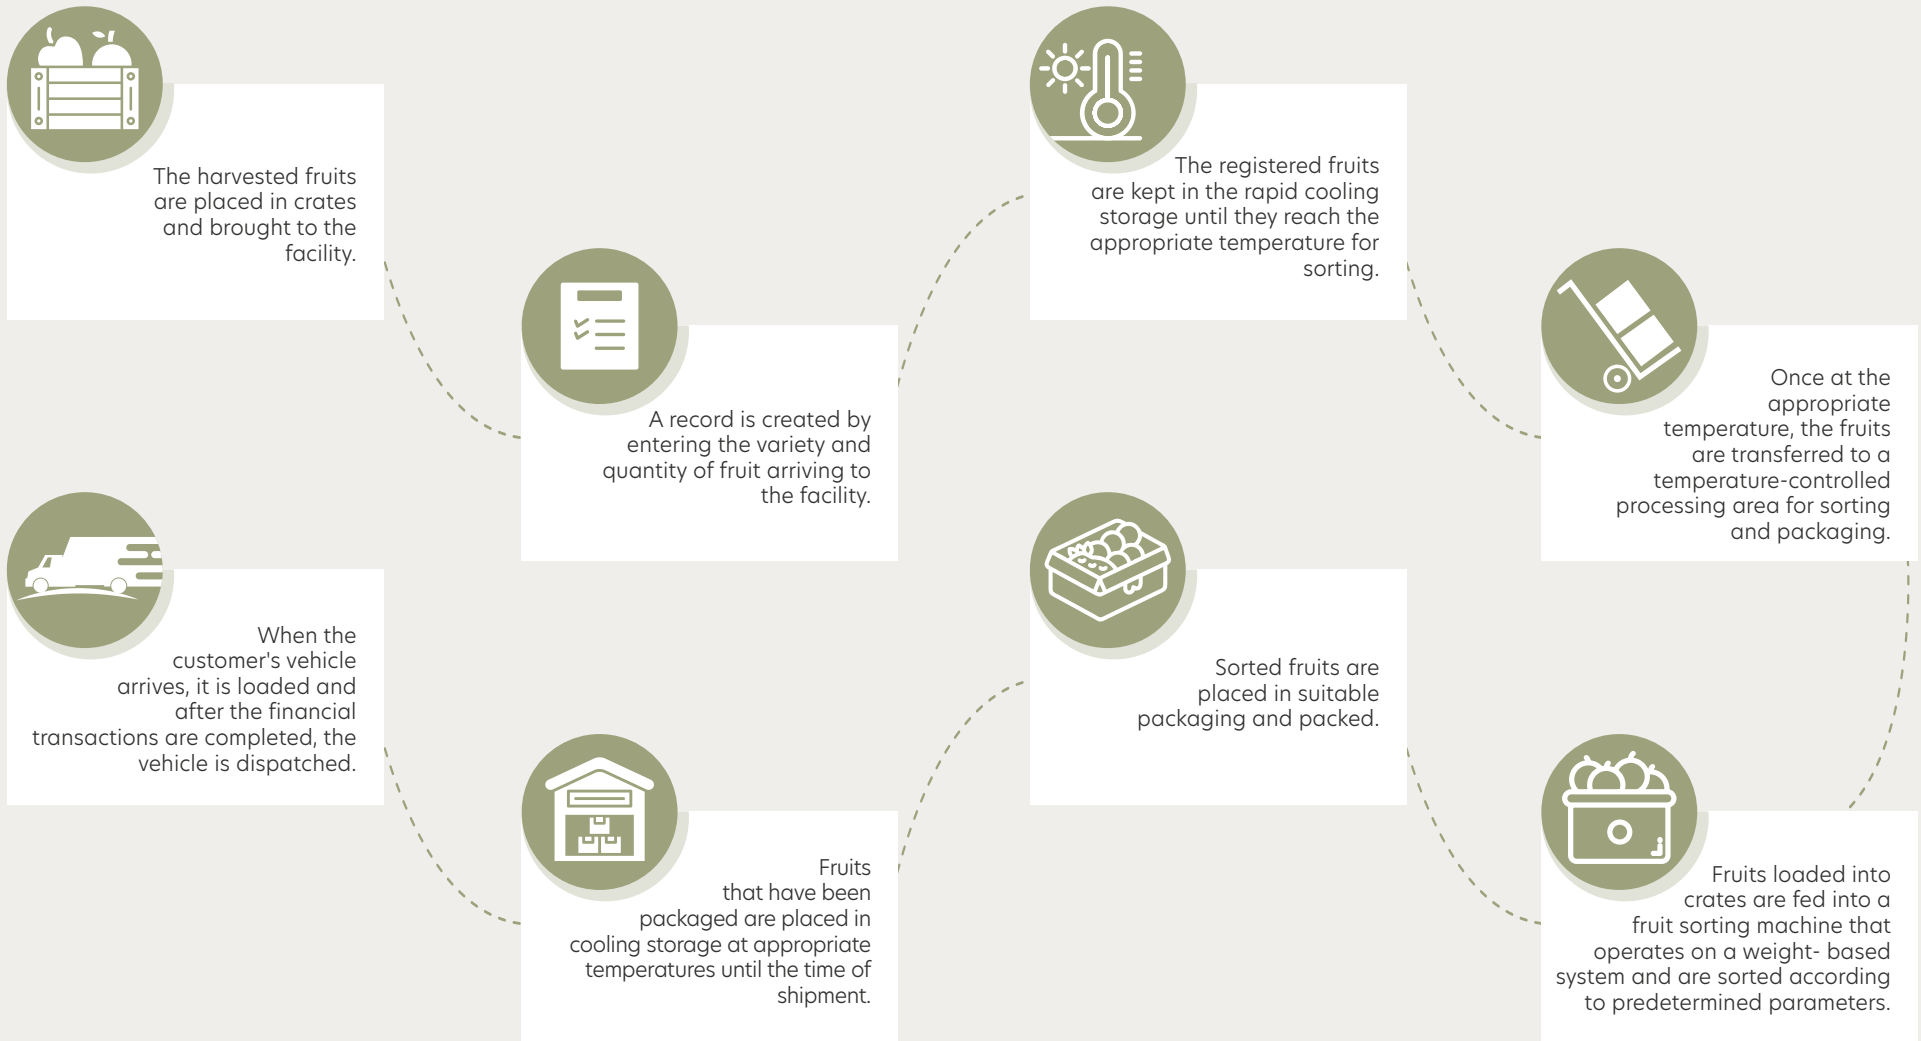

Orchards

We adopt the most efficient working principle in the most fertile lands of the world. We bring technology and labor together to adapt to the balance of nature at every moment of production.

Operating Facility

At dbfruits, the rules set within the framework of international standards apply.
Food health and hygiene are prioritised at every stage.

Apriçot

The apricot, whose first traces were found in the vast steppes of Central Asia, is the first harbinger of spring and the sweetest guest on summer tables. On its journey across continents and through the ages, it has taken root in different countries, shaped by the richness of the sun and the soil. Every apricot grown on our land, which carries the fertility of the Büyük Menderes River, is part of this ancient journey from the past to the present. With this inspiration, we call the special flavours we make from apricots "Meandros" and bring this unique gift of nature to your tables.

Nectarine

First recorded in the 17th century, the nectarine is one of nature's surprises, a glistening, hairless gift from the peach tree with a delicate touch. With its crimson skin that blushes under the golden sun, it brings the joy of summer and is one of the most popular flavours of the season. Inspired by Herodotus, the father of history, who described the fertile lands of Aydın as "the most beautiful earth under the sky", we present the nectarines grown in these lands under the name of Herodotus.

Flat Peach

The flat peach, the first traces of which date back to the 7th century, is an elegant fruit shaped by nature with a delicate touch. Unlike the traditional peach, it is flattened on both sides. With its sweet aroma, silky texture and striking colour, it is one of the most distinctive flavours of the summer season. Inspired by the ancient city of Tralleis, which highlights the deep-rooted history of Aydin, we bring this unique fruit to your tables under the name of Tralleis.

Cherry

A fruit rooted in the fertile soil of Anatolia and lovingly cultivated through the ages... The history of the cherry is as old as the history of mankind. Archaeological findings show that it was first grown in Anatolia and south-eastern Europe. This magnificent fruit, the subject of legends, appearing on the tables of kings and heralding the arrival of spring, has been the common heritage of many civilisations throughout history. In our orchards near the ancient city of Aphrodisias, we keep this deep-rooted heritage alive and grow our cherries with the ancient spirit of Anatolia. We want you to feel the fertility and splendour of Aphrodisias in each and every one of them...

A gift filtered through myths... The persimmon is a fruit that was born from the wise lands of the East and has been a guest on the tables of civilisations, hiding the golden rays of the sun with its sweet texture. This fruit, whose first traces were found in Asia, also had a special place in Ottoman cuisine and symbolised fertility.

In our fertile gardens irrigated by Büyük Menderes, we offer our persimmon ripened by the generous hands of nature with the name of 'Nysa' with the magical combination of history and nature. From tradition to the future, the golden fruit of nature...

Throughout history, from the tables of kings to village markets, from the old world to the new world... The pear, whose first traces are found in Ancient Greece and Rome, has been the symbol of abundance, fertility and hospitality in legends. It is one of the most popular fruits of summer and autumn with its slightly sweet texture, refreshing juicy texture and golden colour. Shining under the sun in the fertile soil of Büyük Menderes, our pears grow as one of the purest flavours of nature. Inspired by ancient times, we crown this fruit that we offer to your tables with the name 'Miletus'.

The hidden jewel of the forests... Blackberries, whose roots go deep into history, are one of the most special fruits offered by nature. Since ancient times, it has been seen as both a source of healing and a sweet treat, and has been one of the fruits offered to the gods in mythology. Reflecting the deepest tones of summer with its purple and black colours, blackberries ripen in the fertile soils of Menderes and reach your tables in their most natural form. We offer you our blackberries, which are carefully grown in the fertile soils of Büyük Menderes, under the name of 'Magnesia' bearing the traces of the past.

Chestnut

A fruit that grows in the bosom of mysterious forests, each one bearing traces of the past... The first traces of the chestnut were found in the 14th century and it is the warm gift of cold winter days. It ripens silently on its branches, accompanies the song of the wind and falls to the ground as a harbinger of autumn. Aydın is one of the most valuable chestnut-growing regions in Türkiye. We harvest this unique fruit with great care and offer it to you.

Fig

From myth to reality, from the table to prayer... The fig is a fruit as old as the history of mankind and is associated with sanctity. For centuries it has adorned tables as a symbol of abundance and fertility. The historian Herodotus expressed his admiration for figs while describing the ancient lands of Aydın. We carefully dry our figs, which grow with the abundance of Büyük Menderes, preserving their naturalness and carrying the heritage of the past into the present.

Olive Oil

A story that began thousands of years ago among the olive trees dancing with the wind in the Mediterranean... Olive oil is the golden liquid of the table, dating back to ancient civilisations. Described in mythology as the miraculous elixir of goddesses, it has been a guest on the tables of kings and has become indispensable to traditions and health. On the shores of Büyük Menderes, we keep alive a heritage that has been passed down through generations, pressing carefully selected olives and bringing them to your tables in their purest form. The golden heritage of ancient lands...

While we continue our production and investments in line with the strategies we have developed within our company, we also continue to develop new projects with a holistic approach. At the point we have reached today, we continue our search for more diversity by going beyond the production practices in which we have already created know-how. While we have taken the first steps of some of these projects, our theoretical studies for others are still ongoing.

Raspberry

Blackberry

Hydroponic Strawberry

Raspberry

In our region, especially in the mountainous areas, there are hardly any locals unfamiliar with the natural growth and taste of these fruits during their season, picked right from the branch. Particularly along the roads in the mountainous areas near the borders between Aydın and İzmir, these naturally grown fruits are summer delicacies that almost every traveler stops to enjoy, invariably staining their hands red with pleasure. From this observation alone, it can be concluded that the conditions of the region create a natural production area for these fruits. Despite this, the planned production of these fruits, which have a very high commercial value, has not become widespread in our region.

Blackberry

In this project, we are carrying out the aim of increasing the diversity of production in our company, we have created a trial garden with EMCOCAL and we are making observations on the trial varieties planted. When this project, which has had positive results so far, reaches its final stage, we intend to invest in this area to increase our production experience and add a new product group to our range.

Hydroponic Strawberry

The rapid decline in arable land and the increasing demand for food from the world's growing population have led to the development of more rational and innovative solutions. Advancing technology has played a major role in implementing these innovations more efficient, and soilless agricultural production is now possible. Moreover, due to uncontrollable changes in environmental factors, it is seen as the future of agriculture. Production that can be carried out 12 months a year in a controlled environment, minimising the use of chemicals, is one of our dreams and goals, as it is for any innovative producer. At the moment we continue with the theoretical studies of the project in order to clarify our investment plans. While our search for land, varieties and methods is still ongoing, we will take the first steps of the project in the field as soon as the conditions are right.
